FCC Compliance Information

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Introduction

In order to remotely connect with your BaseStation 1000 or 3200 irrigation controller and take advantage of BaseManager, the controller must be able to communicate over the Internet. Using a cell modem is one option for wireless Internet communication. The cell modem sends and receives data over a wireless carrier's network.

When you choose a cell modem communication package from Baseline, we provide the cell modem hardware, the SIM card from the wireless carrier, the firmware that activates the connection from your controller, and a 1-year subscription to a data plan with the wireless carrier.

To establish communication through your cell modem, you need to perform the following tasks:

Step 1 – Install the cell modem hardware in your BaseStation 1000 or 3200 enclosure.

Step 2 – Check the firmware version on your controller and install an update if necessary.

Step 3 – Activate your SIM card with Baseline.

Step 4 – Verify the cell modem connection in the controller.

Step 1 – Install the Cell Modem Hardware

Note: The cell modem hardware is only compatible with BaseStation 1000 and 3200 controllers in X cabinet and pedestal (P) enclosures. When the controller and cell modem are ordered together, the cell modem is already installed in the enclosure.

Tools and Materials

- Philips head screwdriver
- Needle-nose pliers
- Cell modem module, antenna and antenna cable with connectors and screws

Note: If you are not able to get a strong signal with the antenna that comes with the package, other options are available. Contact Baseline Support at 866-294-5847.

To install the cell modem hardware

1. We recommend that you back up your current configuration before starting this process in case you need to restore your system.
 - Refer to Backing Up the Controller Programming in the BaseStation 1000 User Manual.
 - Refer to Backing Up Your System in the BaseStation 3200 User Manual.

2. Halt all watering while you install the cell modem hardware.

- BaseStation 1000: Press the **OFF** button.
- BaseStation 3200: Turn the dial to the **OFF** position.

3. Open the internal door of the BaseStation enclosure.

4. Remove the two screws that secure the black plastic cover over the controller PCA board. Put the cover and the screws in a dust free location.

5. Find the orange power connector on the wires coming from the transformer. Gently pull the connector away from the board to disconnect the power.

6. Remove the cell modem hardware and the antenna from its packaging.

7. Use needle-nose pliers to remove the rubber plug from the antenna port on the top of the enclosure.

8. Remove the nut and the lock washer from the bottom of the antenna, and then insert the stem of the antenna into the port on the top of the enclosure.

9. From the inside of the enclosure, place the lock washer on the stem of the antenna, and then thread the nut onto the stem. Use a wrench to tighten the nut sufficiently to ensure that the antenna makes good contact with the outside of the enclosure.

10. Thread the coax connector that is attached to the antenna cable onto the stem of the antenna and hand-tighten it.

Baseline Cell Modem Installation and User Guide

11. Align the holes on the cell modem/SIM card board with the mounting pins on inside roof of the enclosure and use the screws provided to secure the board to the enclosure.

12. Perform one of the following options depending on your controller and firmware version:

Note: If another connector is attached to the 5-pin terminal block that you need, disconnect it, and then reconnect it to the other 5-pin terminal block.

- BaseStation 1000, firmware versions 1.4 and higher
Plug the 5-pin connector from the cell modem/SIM card board into the **top 5-pin terminal block (comm port 2)** on right end of the controller board.
- BaseStation 3200, firmware versions 12.4 – 12.7
Plug the 5-pin connector from the cell modem/SIM card board into the **top 5-pin terminal block (comm port 2)** on right end of the controller board.
- BaseStation 3200, firmware versions 12.8 and higher
Plug the 5-pin connector from the cell modem/SIM card board into the **lower 5-pin terminal block (comm port 3)** on right end of the controller board.

13. Reconnect the orange power connector to the board in order to restore power to the controller.
14. Reposition the black plastic cover over the controller PCA board, and then secure it with the two screws.
15. Close the enclosure door, and then restart the controller.
 - BaseStation 1000: Press the **RUN** button.
 - BaseStation 3200: Turn the dial to the **RUN** position.

Step 2 – Check Your Firmware Version & Update if Necessary

BaseStation 1000 Instructions

BaseStation 1000 controllers running firmware version 1.4 and higher have integrated support for cell modem communication. If your controller is running firmware version 1.3 or lower, you will need to download a firmware update onto a USB drive from the Baseline web site.

To check the version of firmware on your BaseStation 1000 controller

1. On the BaseStation 1000, press the **System Setup** button. The System Setup menu displays.
2. Press the **↓** button to highlight the **Firmware Update** option, and then press the **OK** button to select it. The Firmware Update menu displays.
3. The **USB Update** option should be highlighted. If it is not highlighted, press the **↓** button to highlight it, and then press the **OK** button to select it.

The USB Update screen displays the current firmware version at the top. If your controller is running firmware version 1.3 or lower, you will need to download a firmware update onto a USB drive from the Baseline web site, and then install it on your controller.

To update the BaseStation 1000 firmware from the Baseline web site

You will need a computer with a USB port. This computer must have access to the Internet. You also need a USB (thumb) drive. You download the firmware from the Baseline web site to the USB drive. Then, you take the USB drive to the controller and install the update.

1. Go to the Baseline web site at the following URL:
www.baselinesystems.com
2. On the home page, click **Support**.

3. In the left navigation bar, click **Firmware Version Updates**.
4. Click the **BaseStation 1000** tab.
5. Follow the instructions on the web page to download the update. You can also click the **Printable Instructions** link on the web page to display the instructions in a format that is suitable for printing.

BaseStation 3200 Instructions

BaseStation 3200 controllers running firmware version 12.4 and higher have integrated support for cell modem communication. If your controller is running firmware version 12.3 or lower, you will need to download a firmware update onto a USB drive from the Baseline web site.

To check the version of firmware on your BaseStation 3200 controller

On the BaseStation 3200, turn the dial to the **Advanced** position.

The version number of the firmware displays at the bottom of the screen.

If your controller is running firmware version 12.3 or lower, you will need to download a firmware update onto a USB drive from the Baseline web site, and then install it on your controller.

To update the BaseStation 3200 firmware from the Baseline web site

You will need a computer with a USB port. This computer must have access to the Internet. You also need a USB (thumb) drive. You download the firmware from the Baseline web site to the USB drive. Then, you take the USB drive to the controller and install the update.

1. On a computer that is connected to the Internet, go to the Baseline web site at the following URL:
www.baselinesystems.com
2. On the home page, click **Support**.
3. In the left navigation bar, click **Firmware Version Updates**.
4. Click the **BaseStation 3200 V12** tab.
5. Click the **Printable Instructions** link on the web page to display the instructions in a format that is suitable for printing.

Step 3 – Activate Your SIM Card with Baseline

1. Fill out your information on the **Wireless Service Activation Form** that was enclosed with your cell modem communication package. This form is also available for download at www.baselinesystems.com.

IMPORTANT! Baseline will not activate your SIM card until we have received your Wireless Service Activation Form with your valid billing information. Be sure to read the Wireless Service Terms and Conditions on page 2 of the Wireless Service Activation Form.

2. Fax or mail the form to Baseline. Upon receipt of the form, Baseline will activate your SIM card and then notify you. Baseline's fax number is 208.323.1834.

Note: Please allow 2 business days after Baseline receives your Wireless Service Activation Form for your SIM card to be activated.

Step 4 – Verify the Cell Modem Connection in the Controller

After Baseline informs you that your SIM card has been activated, go to your BaseStation controller and verify that the cell modem is connected to the cellular network.

BaseStation 1000 Instructions

1. On the BaseStation 1000 controller, press the **System Setup** button. The System Setup menu displays.
2. Press the **↓** button to highlight the **Network Setup** option, and then press the **OK** button to select it. The Network Setup menu displays.

After the cell modem hardware has been installed and is powered up, the **Cell Modem Info** option displays on the Network Setup menu.

3. Press the **↓** button to highlight the **Cell Modem Info** option, and then press the **OK** button to select it. The Cell Modem Info screen displays the following information:

- **Status:** Displays the status of the connection. Possible statuses are Initializing, Resetting, No Network, Service Not Authorized, and Connected. Verify that **Connected** displays in the **Status** field.

Note: After you have activated your SIM card with Baseline, the Service Not Authorized status no longer displays.

Cell Modem Info	
STATUS.....	CONNECTED
SIGNAL STRENGTH.....	(-71 dBm).■■■
IP ADDR.....	10.100.0.113
SIM#.....	890141042552519
TOWER MCC/MNC.....	310410

- **Signal Strength:** When your modem is connected, this field shows the strength of the connection in dBm and a signal strength meter represented by a series of bars. More bars mean a stronger signal.
 - -100 dBm or less = Unacceptable Coverage
 - -99 dBm to -90 dBm = Weak Coverage
 - -89 dBm to -70 dBm = Medium to High Coverage
 - -69 dBm or greater = Strong Coverage
 - **SIM#:** The number in this field is the unique serial number of the subscriber identity module (SIM) card that is installed in your cell modem. Baseline must activate your SIM card in order for your cell modem to connect. Prior to activation, the Status field displays Service Not Authorized.
 - **Tower MCC/MNC:** The number in this field identifies the physical cell tower that your modem is connected to.
4. Press the **Back** button to return to the Network Setup menu and then press the **↑** or **↓** button to move to the **BaseManager Setup** option, and then press the **OK** button to select it. The BaseManager Setup screen displays.
5. Verify that there is a checkmark in the **Cell Modem Connect** field.

Note: If the Cell Modem Connect field does not display, verify that the cell modem is properly installed.

6. Press the **Back** button to return to the Network Setup menu and then press the **↑** or **↓** button to move to the **BaseManager Info** option, and then press the **OK** button to select it. The BaseManager Info screen displays.
7. Verify that **Connected** displays in the **Status** field and that **Cell Modem** displays in the **Interface** field.

You can add this controller to your BaseManager account using the Admin tool in BaseManager. If you do not have a BaseManager account, call Baseline to set one up.

Baseline Support 866.294.5847

BaseStation 3200 V12 Instructions

1. On the BaseStation 3200 V12, turn the dial to the **Network** position.
2. Press the **Next** button to highlight **AT&T Cellular Modem Setup**, and then press **Enter**. The AT&T Cellular Modem Settings screen displays.
 - **State:** Displays the status of the connection. Verify that **CELL_Connected** displays in the **State** field.
 - **Signal:** When your modem is connected, this field shows the strength of the connection in dBm and with a signal strength meter represented by a series of Xs. More Xs mean a stronger signal.
 - -100 dBm or less = Unacceptable Coverage
 - -99 dBm to -90 dBm = Weak Coverage
 - -89 dBm to -70 dBm = Medium to High Coverage
 - -69 dBm or greater = Strong Coverage
 - **SIM#:** The number in this field is the unique serial number of the subscriber identity module (SIM) card that is installed in your cell modem. Baseline must activate your SIM card in order for your cell modem to connect.
 - **Tower:** The number in this field identifies the physical cell tower that your modem is connected to.
3. Press the **Back** button to return to the **Network** menu.
4. Press the **Next** or **Previous** button to highlight the **BaseManager Server Setup** option, and then press the **Enter** button to select it. The BaseManager Address screen displays.
5. Verify that **Cell Modem** displays in the **Connection** field.
6. To find the origination date of your connection and see the number of bytes received from and sent to BaseManager, press the **Back** button to return to the **Network** menu. These details display in the lower-left corner of the menu screen.
